### Software for Mocking-Up User Screens?

by [Don Hinkelman](#) - Friday, 4 March 2005, 01:24 PM

What is the easiest, cheapest software for mocking up user input screens and report screens when designing a new Moodle module?

Tom Robb and I are designing a SignUp/Project module and need to provide detailed user requirements to a team of software engineering students at my university. I would like to give them screen designs such as with the [Roles Specification](#).

Thanks!
