Cache administration

Installed cache stores

Plugin	Ready	Stores	Modes	Supports	Actions
APC user cache (APCu)		0	Application, Session	ttl, key awareness	
File cache	✓	1	Application, Session	data guarantee, ttl, key awareness	Add instance
Memcache		0	Application	ttl	
Memcached		0	Application	ttl	
MongoDB		0	Application	data guarantee	
Redis	✓	0	Application, Session	data guarantee, locking, key awareness	Add instance
Session cache	✓	1	Session	data guarantee, ttl, key awareness	
Static request cache	✓	1	Request	multiple identifiers, data guarantee, ttl, key awareness	

Configured store instances

Store name	Plugin	Ready	Store mappings	Modes	Supports	Locking 
Default file store for application caches	File cache	✓	0	Application, Session	data guarantee, ttl, key awareness, searching by key	Default file locking
Default static store for request caches	Static request cache	✓	0	Request	multiple identifiers, data guarantee, ttl, key awareness, searching by key	Default file locking
Default session store for session caches	Session cache	✓	0	Session	data guarantee, ttl, key awareness, searching by key	Default file locking

Known cache definitions

Definition	Mode	Component	Area
Accumulated information about modules and sections for each course	Application	core	coursemodinfo

Definition	Mode	Component	Area
Activity completion status	Application	core	completion
Calendar course categories that a user can access	Session	core	calendar_categories
Calendar subscriptions	Application	core	calendar_subscriptions
Concept linking	Application	mod_glossary	concepts
Config settings	Application	core	config
Context with insights	Application	core	contextwithinsights

Definition	Mode	Component	Area
Course categories lists for particular user	Session	core	coursecat
Course categories records	Request	core	coursecatrecords
Course categories tree	Application	core	coursecattree
Course completion status	Application	core	coursecompletion
Course group information	Application	core	groupdata
Data used to persist user selections throughout Moodle	Session	core	userselections

Definition	Mode	Component	Area
Database meta information	Application	core	databasemeta
Event invalidation	Application	core	eventinvalidation
Event observers	Application	core	observers
External badges for particular user	Application	core	externalbadges
Folder name cache	Session	repository_skydrive	foldername
Google file IDs for folders in the system account	Application	repository_googledocs	folder

Definition	Mode	Component	Area
Grade category queries	Session	core	grade_categories
Grade items cached for evaluating conditional availability	Application	availability_grade	items
Helper caching	Request	tool_uploadcourse	helper
HTML Purifier - cleaned content	Application	core	htmlpurifier
Language string cache	Application	core	string
List of available languages	Application	core	langmenu

Definition	Mode	Component	Area
List of course contacts	Application	core	coursecontacts
List of enabled user tours information which is fetched on every page	Application	tool_usertours	tourdata
List of suspended users per course	Request	core	suspended_userids
List of user tour steps	Application	tool_usertours	stepdata
Mapping of icons for font awesome	Application	core	fontawesomeiconmapping
Message processors enabled status	Application	core	message_processors_enabled

Definition	Mode	Component	Area
Navigation expandable courses	Session	core	navigation_expandcourse
OneDrive file IDs for folders in the system account	Application	repository_onedrive	folder
Plugin info manager	Application	core	plugin_manager
Plugins available callbacks	Application	core	plugin_functions
Post processed CSS	Application	core	postprocessedcss
Pre sign-up data for particular unregistered user	Session	core	presignup

Definition	Mode	Component	Area
Question definitions	Application	core	questiondata
Repositories instances data	Request	core	repositories
Role definitions	Application	core	roledefs
Search results for tagged items	Session	core	tagindexbuilder
System capabilities list	Application	core	capabilities
Tags collections and areas	Request	core	tags

Definition	Mode	Component	Area
Temporary tables cache	Request	core	temp_tables
This stores the list of event subscriptions for individual courses	Application	tool_monitor	eventsubscriptions
This stores the list of plugins with mobile addons	Application	tool_mobile	plugininfo
Time created for most recent message between users	Application	core	message_time_last_message_bet
User grades cached for evaluating conditional availability	Application	availability_grade	scores
User's groupings and groups per course	Application	core	user_group_groupings

Definition	Mode	Component	Area
YUI Module definitions	Application	core	yuimodules

[Rescan definitions](#)

Summary of cache lock instances.

Name	Type	Default	Uses	Actions
Default file locking	File locking	✓	3	

Add a new lock instance

Stores used when no mapping is present

Mode	Store mappings
Application	Default file store for application caches
Session	Default session store for session caches
Request	Default static store for request caches
