

Student-Quiz

Administrator Manual

1 Student-Quiz Question Behavior

To get the full benefit of the Student-Quiz Plugin you should also install the associated question behavior which you can download from

https://github.com/frankkoch/moodle-qbehaviour_studentquiz

This question behavior plugin adds the ability to rate and comment questions. This has the benefit of encouraging students to think about the question and their answer. It also can benefit the teacher if students point out problems with the question. Install this plugin after you have installed Student-Quiz.

2 Installation

The Student-Quiz plugin depends on the Quiz plugin which is installed as default in Moodle. The simplest way to install the plugin is by going to the Site administration -> Plugins -> Install plugins page.

Important: The zip and the folder name in the zip have to be named "Studentquiz".

3 Settings

You can setup the points used by the ranking table. For more information about the ranking table look at the User-Manual chapter 2.1.

4 How to uninstall

Important: Make sure you have backed up all your questions. One way to do this is to export them all to XML. Removing or uninstalling the Student-Quiz activity removes all questions in the same context as well.

To uninstall go to the Site administration -> Plugins -> Plugins overview. Look for Student-Quiz and click Uninstall. If you use Student-Quiz Question Behavior plugin uninstall it first in the same way.

To uninstall the Student-Quiz Behaviour you have to remove all Quiz activities first. Go to the course, click "Turn editing on". Delete all Quizzes under the Title "Orphaned activities (section 999)".
