

YouTube Anywhere

Documentation

April 22nd, 2013

Updated

September 24th, 2014

The YouTube Anywhere subplugin for Moodle's TinyMCE allows users to upload or record video directly into YouTube, and to select from previously uploaded YouTube videos. The video is inserted into the HTML area for display. The video file is stored on YouTube, though it is accessible from Moodle. YouTube Anywhere will only work on Moodle 2.4 and greater.

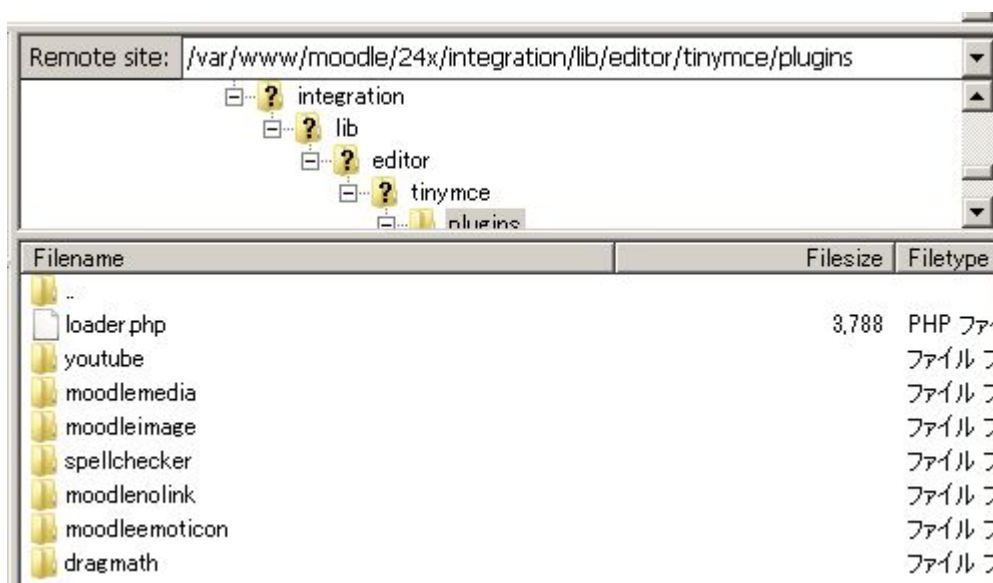

Requirements

- Moodle 2.4 or greater
- Internet access
- Multimedia plugins filter enabled (to turn YouTube links into YouTube players)
- YouTube API keys (Public API key, OAUTH2 client id, OAUTH2 secret). These are available free of charge from the Google Developers Console.

Installation

The YouTube Anywhere plugin is contained in the "youtube" folder. That folder should be placed in the following directory of a Moodle installation: [\[PATH TO MOODLE\]/lib/editor/tinymce/plugins](#)

Other folders in that directory will include, "spellchecker" and "moodlemedia."

Once the folder is in place Moodle will be able to install the plugin. Login as the site administrator. Moodle should detect the YouTube Anywhere plugin and present a page with plugin information and the unavoidable “option” to proceed to install a new plugin. If Moodle does not automatically direct you to this page, you can go there from the Moodle menu:

Site Administration -> Notifications

Follow the prompts to install the plugin. On the last step Moodle will show the settings page for YouTube Anywhere. The settings can be accessed by the administrator at any time from the Moodle menu:

Site Administration -> Plugins -> Text Editors->TinyMCE HTML Editor -> YouTube Anywhere

The YouTube Anywhere Settings Page

There are four settings sections:

- YouTube Anywhere Tabset Settings
- Authentication and API Key settings
- Access Settings
- Video Default Settings

i) Tab Visibility

These allow you to set which of the three tabs will be displayed.

The screenshot shows the 'YouTube Anywhere Tabset Settings' panel. It contains three settings, each with a checkbox and a 'Default: Yes' label. The first setting is 'Enable file submissions' with the property name 'tinymce_youtube | allow_uploads'. The second is 'Enable webcam submissions' with the property name 'tinymce_youtube | allow_webcam'. The third is 'Enable submissions from YouTube account' with the property name 'tinymce_youtube | allow_manual'.

Property	Property Values	Description
Enable file submissions	True False	If true, students will have the option to upload a file to YouTube.
Enable webcam submissions	True False	If true, students will have the option to record a video from their webcam directly into YouTube.
Enable submissions from YouTube account	True False	If true, students will have the option to select a YouTube video from a list of their uploaded videos.

ii) Access Settings

It is possible to configure who will see the YouTube Anywhere icon on the TinyMCE editor. This can be specified by Moodle capability tinymce/youtube:accessible or by simply using the checkboxes as in the screenshot below. (update 2014/09/24: The checkbox method is not really

The screenshot shows the 'Access Settings' panel. At the top, there is a dropdown menu for 'Determine Access:' with the selected option 'By Moodle Role (checkboxes below)' and a 'Default: By C' label. Below this, there is a text label 'Use either the checkboxes below or the special Moodle ca'. Underneath, there is a section for 'Allowed Roles' with the property name 'tinymce_youtube | allowedroles'. This section contains a list of roles with checkboxes: 'Allow Guests', 'Allow Front Page Users', 'Allow Authenticated Users', 'Allow Students', 'Allow Non Editing Teachers', 'Allow Teachers', 'Allow Managers', 'Allow Course Creators', and 'Allow Administrators'. The 'Allow Students', 'Allow Non Editing Teachers', 'Allow Teachers', 'Allow Managers', 'Allow Course Creators', and 'Allow Administrators' checkboxes are checked. At the bottom, there is a text label 'Default: Allow Teachers, Allow Managers, Allow Course Creators, A' and another text label 'Moodle roles which can access the YouTube Anywhere icon'.

the best way to do this for some sites. And it may be removed in a later version.)

iii) Authentication and API Keys

Access Settings

Determine Access: By Moodle Role (checkboxes below) Default: By C

tinymce_youtube | role_eval

Use either the checkboxes below or the special Moodle ca

Allowed Roles tinymce_youtube | allowedroles

- ☐ Allow Guests
- ☐ Allow Front Page Users
- ☐ Allow Authenticated Users
- ☒ Allow Students
- ☒ Allow Non Editing Teachers
- ☒ Allow Teachers
- ☒ Allow Managers
- ☒ Allow Course Creators
- ☒ Allow Administrators

Default: Allow Teachers, Allow Managers, Allow Course Creators, A

Moodle roles which can access the YouTube Anywhere icon

The authentication and api keys only apply to the video uploads tab and the browse tab. The webcam tab contains its own authentication method which we cannot control.

Authentication and API Key Settings

Authentication Method tinymce_youtube | authtype Use students YouTube accounts Default: Use master YouTube a

Google Public API Key tinymce_youtube | devkey AlzaSyBDhFEfOEM7FkDEVDx2C Default: Empty

YouTube master account user tinymce_youtube | youtube_masteruser bitwalkerjapan@gmail.com Default: Empty

Necessary if authenticating with a master YouTube account.

YouTube master account password tinymce_youtube | youtube_masterpass ☐ Unmask

Necessary if authenticating with a master YouTube account.

Google OAUTH2 Client ID tinymce_youtube | youtube_clientid 66344734523647.apps.googleusercontent.com Default: Empty

Necessary if authenticating with student's YouTube accounts.

Google OAUTH2 Client Secret tinymce_youtube | youtube_secret SRTIm_Zclg45FFgdd676474 Default: Empty

Necessary if authenticating with student's YouTube accounts.

The authentication method options are “use master YouTube account” or “use the users YouTube account”. The two options are mutually exclusive.

The Google public API key is required for uploading, regardless of the authentication option. The OAUTH2 client id and secret can and should be the same as those used by the Google Docs Portfolio plugin and the Google Docs Repository plugin, since they are unique to your website.

Property	Property Values	Description
Google Public API Key	Google Public API Key	Can be obtained at: https://console.developers.google.com *Necessary for uploading*
Authentication method	-master YouTube account -student's YouTube account	If "Use master YouTube account" is selected, all YouTube file uploads will be to the master YouTube account. Webcam and YouTube URL submissions are unaffected by this.
YouTube master account user	YouTube user id	A YouTube user id or email. Necessary if authentication method is "master YouTube account"
YouTube master account password	YouTube password	The password of the master YouTube account. Necessary if authentication method is "master YouTube account"
Google OAuth2 ClientId	OAUTH2 client id	Necessary if authentication method is "student's YouTube account." More info at: http://docs.moodle.org/27/en/Google_OAuth_2.0_setup
Google OAuth2 Secret	OAUTH2 secret	Necessary if authentication method is "student's YouTube account." http://docs.moodle.org/27/en/Google_OAuth_2.0_setup

(iv) Video Default Settings

The video default settings are associated with the video that is uploaded or recorded into YouTube. They control the video's appearance on search listings, video category, ability to be commented on, rated or responded to. Videos recorded directly from webcam are less configurable using the YouTube API and only privacy and category settings are applied.

The three privacy setting options are: unlisted, private and public. Unlisted means that the video will not display in YouTube searches, but that anyone who knows the unlisted URL of the video, can see it. Private means that YouTube users must be explicitly granted permission before they can see a video. YouTube imposes a 50 user limit on private videos. Public means that anyone can see the video, and that it will show up in search listings.

Default: No

Using YouTube Anywhere

When a student has access privileges they will see the YouTube anywhere icon on the HTML editor.

After clicking on the icon a popup form will be displayed. On the form there will be a set of horizontal tabs. These can be enabled or hidden in the YouTube Anywhere settings. By default all three show and they are “Upload a Video”, “Record a Video” and “Select a YouTube Video”.

The Upload Video Form

The upload form allows the student to choose a video file from their computer/device and upload to YouTube. If using “master account” to authenticate, it is simply a matter of clicking the “choose” button to select a video, and then clicking the “upload” button. If using student’s accounts to authenticate, they will first be shown a Google login form and will need to approve access of their YouTube accounts, by the Moodle site.

When the user clicks the upload button, the file will be submitted. YouTube does not offer up any information about the progress status of the upload. So we can not show a meaningful progress bar. In place of that a simple circular animation is displayed. Once the upload has completed the animation and upload form will be replaced by an “Upload Successful” message. (Unfortunately if the upload fails, Moodle will receive no notification of that and the animation will continue until the page is reloaded.) When the file arrives at YouTube, it is titled with the name of the the user that submitted it.

If using "master account" authentication, the YouTube video will be uploaded into the account of the YouTube master user as set in the plugin settings page. If using "student's YouTube account" the video will be uploaded into the student's YouTube account. There will probably be a delay of a few seconds or minutes before the submitted video is ready to be played back. So there is usually no cause for concern if the YouTube player reports that the video is unavailable.

The Record Video Form

This form allows the student to record a video directly from their webcam, and to upload that video to YouTube.

Unlike the upload form, there is no "master account" authentication option. Each student will be presented with a Google login form before they can begin recording. The submitted video is stored in the student's YouTube account.

To display the recording widget, the student will first need to click the "Click to Record a Video" button.

After the widget displays the student will need to both login to Google and to grant permission to the recording widget to access the device/pc camera and microphone.

The Select a YouTube Video Form

This form allows the student to choose a YouTube video from a list of videos they have previously uploaded or recorded.

Using YouTube Anywhere from Shared Computers

There is no automatic way to completely log a user out of YouTube after they have logged in with YouTube Anywhere, when using student authentication. It is a known shortcoming of the YouTube/Google API. This means that if a computer is shared by different students, e.g a lab computer, each student should close their browser after they have finished their class/session. This is good practice in any case when using shared computers.

Student Account vs Master Account Authentication

In general you are advised to use student account authentication if possible. This is for two reasons. Firstly if students have free access to upload to the master account, the master account owner must be responsible for the uploaded content. They risk having their account closed because of the upload habits of their students. Secondly the webcam tab only supports student account authentication. So if YouTube Anywhere is set to master account authentication on the settings page, and students use the webcam to record, those recordings will not show in the browse tab. Only uploaded recordings will show there.
